User Stories

Friday, January 26, 2024   10:31 PM

User Story 1:
- **As a social butterfly, I want to discover new people to chat with based on my interests and location, so I can expand my social circle.**

- **Acceptance Criteria:**
    - User can specify their interests and location in their profile.

    - App recommends other users with similar interests nearby.

    - User can browse profiles and initiate chats with anyone they like.

User Story 2:
- **As an expressive communicator, I want to send text messages, voice notes, and images/videos to my contacts, so I can share my thoughts and experiences in a variety of ways.**

- **Acceptance Criteria:**
    - App supports text, voice, and multimedia messaging.

    - Messages are sent and received in real-time.

    - Users can view and listen to messages seamlessly.

User Story 3:
- **As a privacy-conscious user, I want to control who can message me and set up disappearing messages, so I can feel secure and in control of my interactions.**

- **Acceptance Criteria:**
    - User can choose who can see their profile and send messages.

    - Disappearing messages automatically delete after a set time.

    - User can report and block unwanted users.

User Story 4:
- **As a language enthusiast, I want to translate messages in real-time, so I can communicate with people from different backgrounds.**

- **Acceptance Criteria:**
    - App can automatically translate messages between different languages.

    - Translation is accurate and natural-sounding.

    - User can choose which languages to translate

User Story 5:
- **As a busy professional, I want to schedule private or group calls directly within the chat app, so I can seamlessly transition from text communication to voice or video conversations without juggling different platforms.**

- **Acceptance Criteria:**
  - Users can initiate and schedule calls within the chat interface.

  - Call invitations are sent to other users and easily visible.

  - Both video and audio calling functionalities are available.

  - Users can join scheduled calls directly from the chat window.

User Story 6:
- **As a forgetful friend, I want to quickly search through past chat history for specific keywords, dates, or topics, so I can easily recall important conversations or information without scrolling through endless messages.**

- **Acceptance Criteria:**
  - Advanced search functionality allows for keyword, date, and topic filtering.

  - Search results are clearly displayed and readily accessible.

  - Users can revisit specific messages within the search results.

User Story 7:
- **As a creative individual, I want to personalize my chat experience with custom emojis, stickers, and animated GIFs, so I can express myself in fun and unique ways and add personality to my conversations.**

- **Acceptance Criteria:**
  - Users can access a library of diverse emojis, stickers, and animated GIFs.

  - Custom emoji creation or upload options are available.

  - Animated GIFs display smoothly and seamlessly within chats.

User Story 8:
- **As a multitasker, I want to receive chat notifications even when using other apps on my device, so I can stay connected and respond to messages promptly without constantly switching back and forth.**

- **Acceptance Criteria:**
  - Customizable notification options allow for pop-up messages, banner alerts, or sound notifications.

  - Priority levels for notifications can be set for individual contacts or groups.

  - Do Not Disturb mode allows for temporary suspension of notifications.

User Story 9:
- **As a data-conscious user, I want to control my data usage by setting limits on download and upload bandwidth for media content shared within the app, so I can manage my mobile data consumption and avoid exceeding my plan.**

- **Acceptance Criteria:**
  - Users can define data usage limits for media downloads and uploads.

- App provides estimated data consumption information for media files.

- Low data mode automatically optimizes image or video quality to reduce data usage.

Additional Considerations:

- **Offline functionality:** Allow users to send and receive messages even when offline.

- **Group chats:** Create and manage group chats for multiple users.

- **Notifications:** Receive notifications for new messages and mentions.

- **Customization options:** Personalize the chat experience with themes, emojis, and avatars.

- **Feedback and reporting:** Implement mechanisms for users to report bugs and suggest improvements.
